

Demographic Infographic

Create a demographic infographic of the FIVE or TEN demographic measurements you think important/under-reported. You must:

1. Include facts that show the relationship between demographic measurements (e.g. GDP per capita is correlated with better health care and access to food which translates into a higher life expectancy).
2. Use words, pictures, numbers and symbols to order the measurements to best illustrate their relationship and meaning.
3. Create a work that effectively uses the principles and elements of design - it must be a 'good copy' ready for display.

See example on this site for exemplar.

Explore the long list of demographic characteristics at: <https://www.gapminder.org/data/>

List of possible demographic markers:

- GDP per capita
- Gini coefficient
- Life expectancy
- Literacy rate
- infant mortality
- crime rate
- homicide rate
- fertility rate
- birth rate
- suicide rates
- unemployment rates
- Age structure
- sex ratio

Grade: Media and Geography.
